

Release Notes Version 1.5.3

Cohort Comparison Report

The [Cohort Comparison report](#) allows you to compare a number of attributes for a given group of students on the same chart.

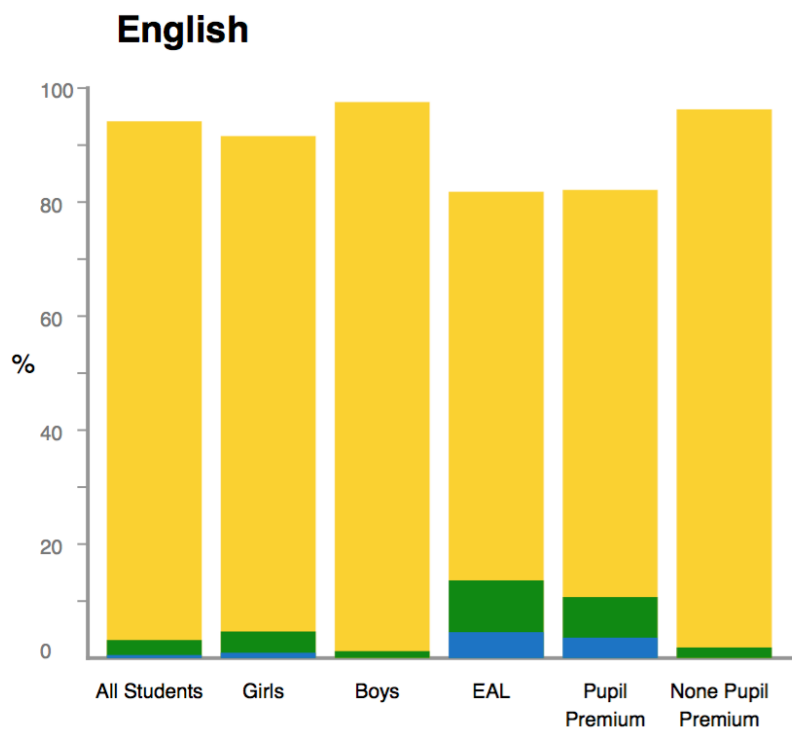

Figure 1. Example of a subject with assessments show by attribute

Quick Start

1. Select **Cohort Comparison** from the **Reports** menu.
2. Select a group of students, for example a year group.
3. Select the attributes that you would like to appear on the report
4. Click **Create**, and then **Download** when the report is ready.

Options

From **Objectives** select aspects in addition to subjects.

Format offers the choice of showing only assessments at your key score and above (e.g. Secure and above), or assessments at all levels. You can also choose to show either the percentages of only those assessed, or of all of the objectives for the given students, subject or aspect combination.

You can show the data behind the charts, by choosing **Bar Charts with Data** in the **Output** selection.

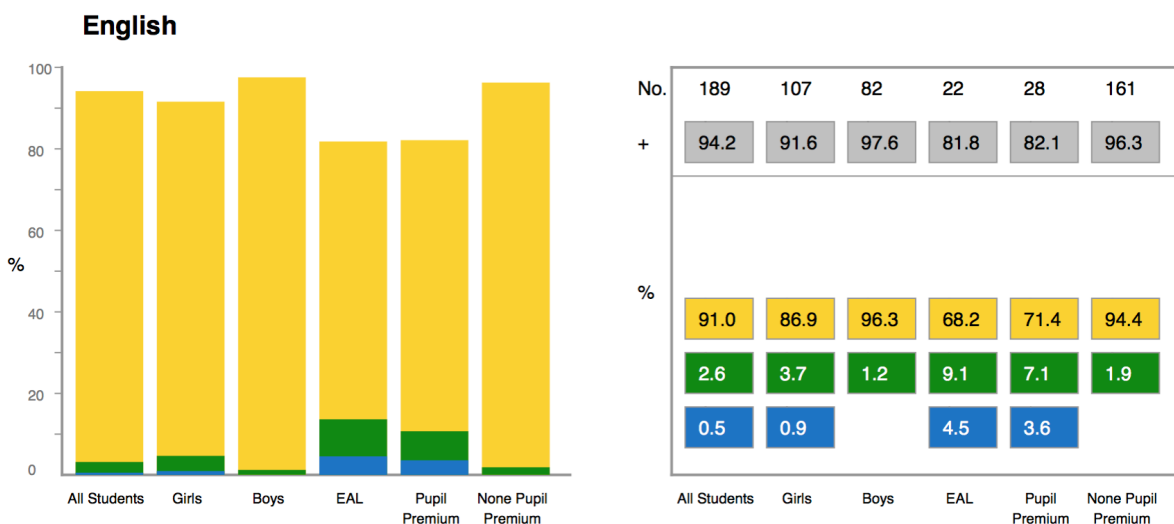

Figure 2. Example of chart with data option

Notes

Attributes appear in the order that you select them, but are always preceded with 'All Students' (not optional).

The assessments are selected with 'Limit to Current' set. This means the reports don't include assessments made for children assessed at earlier or later year objectives.

Progress Reports

A new option has been added to the current progress charts, to show data tables alongside the charts.

From Output choose Bar Charts with Data to see the data show in the same format as Figure 2.
